A QUEX S device can be traded in for a QUEX ED at any time. The base trade-in price is 9500 EUR, plus the additional cost of applicable modules and software programs. Since the QUEX ED comes with all Omnis modules and certain additional software programs, the cost of any of those modules or additional programs you did not already have for your QUEX S must be added to the base trade-in price. The USD amount will be calculated at the daily exchange rate and provided at the time of purchase.
